Getting Started

Introduction

Masterstudy WordPress Theme is a responsive Masterstudy WordPress theme targeted especially for Masterstudy, chalet, resort, motel, hostel, bed and breakfast and apartment with all-in-one booking system within theme package. Masterstudy is powered by Masterstudy booking management features such as seasonal pricing, booking management, taxes, flexible rates and many more. With our advanced booking management, customers can search available rooms and book online.

Some of the features of the Masterstudy Theme include:

- Complete LMS System - No extra plugin purchase required!
- Quizzes, Lessons and all other needed content types for the LMS.
- Online and Offline Payments - Make a payment online from your website via PayPal or cash.
- Taxes and Fees – Set pricing on all accommodation charges: add mandatory fees, accommodation taxes, service taxes. The guests can see the summary and total of charges before making a booking. All this info on each booking is stored in the admin dashboard as well.
- GDPR Compliant - Your guests will find the checkbox for opt-in consent below each booking form to accept your website terms and conditions before reservation.
- Multilingual Support - Easily translate a website to any language.
- Responsive & Mobile Friendly - Masterstudy is fully responsive and looks great on all devices.
- Built with SASS – the most stable and powerful professional grade CSS extension language
- Compatible with Firefox, Safari, Chrome, Edge and IE10+
- Bootstrap-based Responsive Layouts
- Ability to have a Background image for your website
- Ability to use any of 800+ Google Fonts
- Visual Composer drag & drop page builder
- WooCommerce compatibility
- Custom SVG and FontAwesome icons
- One-click demo content import
- Retina Ready
- SEO ready

System Requirements

To install the Masterstudy Theme you must have a working version of WordPress already installed. For information regarding the installing of the WordPress platform, please see the WordPress Codex at http://codex.wordpress.org/Installing_WordPress.

Installing the Theme

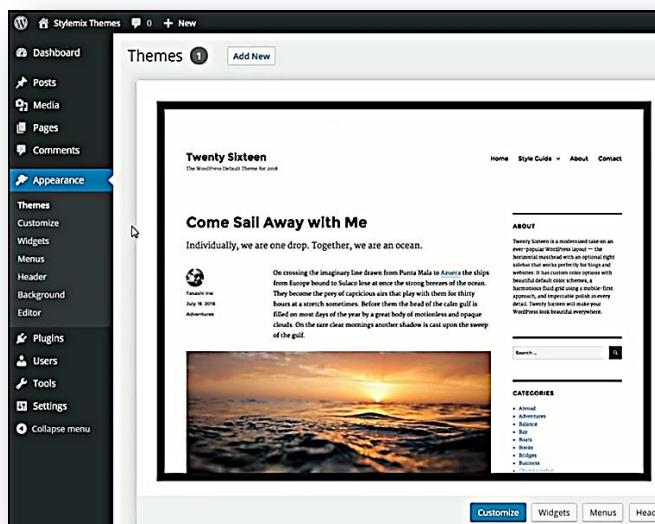

You can install the theme just as you would install any other WordPress Theme.

Note: In order to install a theme, you would need to login to your WordPress admin area with Administrator rights.

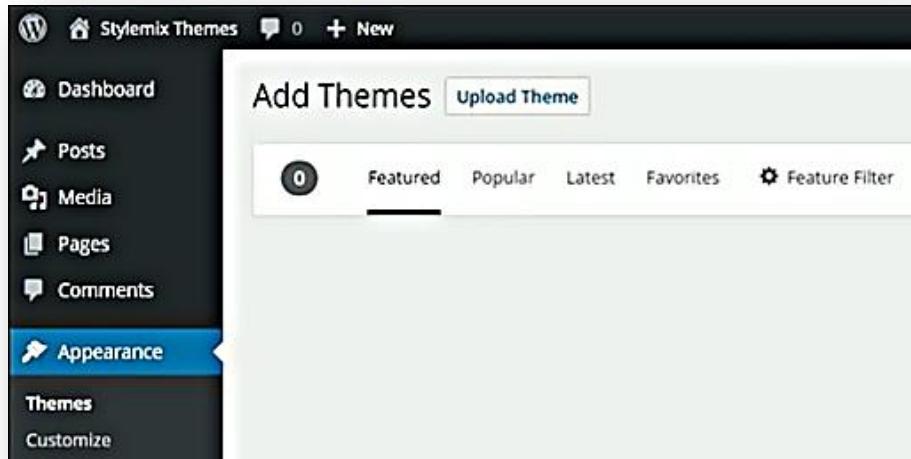

Tip: If you wish, you can view a video of the Installation process at
<https://youtu.be/QjQdVuxXieI>

To install the theme:

1. In the WordPress Dashboard, click on **Appearance > Themes** to open the Themes screen.

2. Click on the **Add New** button to open the Add Themes screen.

3. Click on the **Upload Theme** button and upload the zipped theme file you have downloaded from ThemeForest - <https://help.market.envato.com/hc/en-us/articles/202821510-Theme-is-missing-the-style-css-stylesheet-error>.

Note: Depending on the speed of your Internet connection, it may take some time to upload the zip file.

4. Once the file is uploaded click on the **Install Now** button to install the theme.

Note: If you have trouble installing the theme, please see the next section: *What to do if the theme installation fails.*

5. Once the theme is installed, you need to activate the theme to enable the Masterstudy Theme demos and theme auto update feature.

Click on **Activate** to activate the theme. You will then have to generate a token.

Steps for activating the theme:

- 1) Click on the **Generate a Personal Token** link. A new window will open that takes you to the Envato Account sign-in page.
- 2) **Sign in** using the credentials of the same account you used to purchase the Masterstudy theme.
- 3) **Enter a name** for the token. (This name is to identify this token anytime later.)
- 4) **Select the following checkboxes from the Permissions Needed section:**
 - * View Your Envato Account Username,
 - * Download Your Purchased Items,
 - * Verify Purchases You've Made, and
 - * List Purchases You've Made.
- 5) Select the checkbox to **agree** to the terms and conditions and then click on the **Create Token** button.
- 6) A new page will load with a token in a box. **Select the token text** and copy it to the clipboard by pressing **Ctrl+C** on your keyboard.

I have read, understood and agree to the [Terms and Conditions](#).

Create Token

6. Paste the token in the provided box and click on the **Submit** button.

If activation is successful, you will see a green check mark.

A screenshot of a web interface showing a token input field and a submit button. The input field contains the token: hv32h45GhJhrPD2UDbmMp1HPXhd6pzk. To the right of the input field is a blue button with a white checkmark icon and the word "SUBMIT".

You can follow [this manual](#) if activation fails.

What to do if the theme installation fails

If the import stalls and fails to respond after a few minutes, or if WordPress gives you an error message, you are suffering from PHP configuration limits that are set too low to complete the process. You should contact your hosting provider and ask them to increase those limits to a minimum as follows:

- max_execution_time 600
- memory_limit 128M
- post_max_size 32M
- upload_max_filesize 32M

You can verify your PHP configuration limits by installing a simple plugin found here:

<http://wordpress.org/extend/plugins/wordpress-php-info>. You can also check your PHP error logs to see the exact error being returned.

Viewing System Status

You can also view some of your WordPress system settings by going to the Masterstudy Theme System Status page. (Click on **Masterstudy > System Status** in the WordPress menu.) This page will provide information about your WordPress environment and your server environment.

The screenshot shows the 'System Status' page with the following sections and data:

WordPress Environment			
Setting	[?]	Value	
Home URL:	[?]	http://manuals.stylemix.biz	
Site URL:	[?]	http://manuals.stylemix.biz	
WP Version:	[?]	4.6.1	
WP Multisite:	[?]	–	
WP Memory Limit:	[?]	256 MB	
WP Debug Mode:	[?]	<input checked="" type="checkbox"/>	
Language:	[?]	en_US	

Server Environment			
Setting	[?]	Value	
Server Info:	[?]	Apache/2.4.23 (Unix) OpenSSL/1.0.2-fips mod_bwlimited/1.4	
PHP Version:	[?]	5.6.28	
PHP Post Max Size:	[?]	40 MB	
PHP Time Limit:	[?]	30 - We recommend setting max execution time to at least 180. To import classic demo content, 300 seconds of max execution time is required. See: Increasing max execution time to PHP	

Any items that require your attention will be highlighted in yellow.

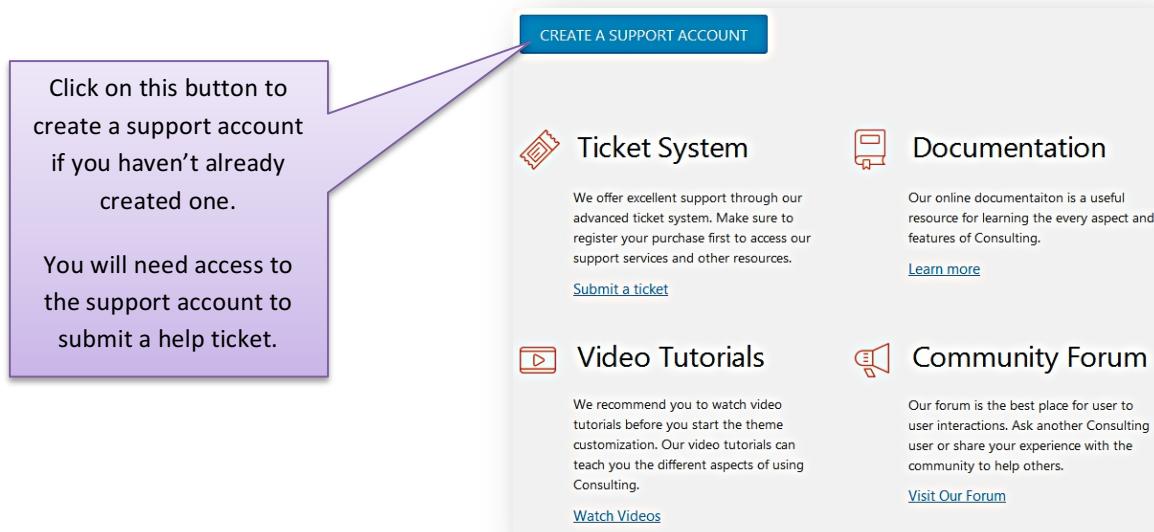

Getting Help

Your Masterstudy Theme comes with six months of free support.

In case you are facing problems with using the Masterstudy Theme, you can get help in the following ways:

- Read our online documentation.
- Watch online video tutorials to learn how to customize the theme.
- Visit our Community Forum.
- Submit a Help Ticket.

Click on **Masterstudy > Support** in the WordPress menu to access the Support page.

Note: You can also get extended support through subscriptions via ThemeForest.

Importing the Demo Content

Once the theme is installed, you will find a new **Masterstudy menu** in the WordPress dashboard. You can use this menu to access the different theme-related pages.

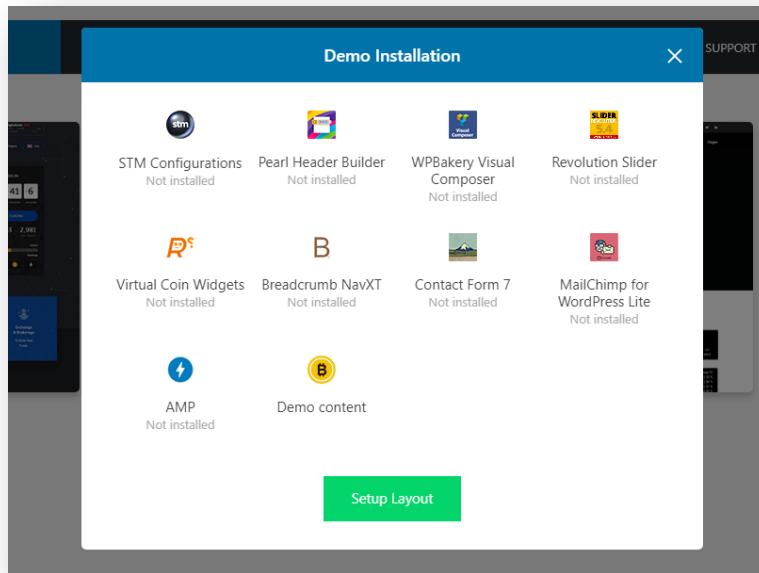

Don't know where to start on building up your site? We have created an option for you to recreate our theme demo site with just one click.

Tip: Before importing the demo content, you can check out the various demos at <http://masterstudy.stylemixthemes.com/>. You can see the different demos and decide on which one suits your firm the best.

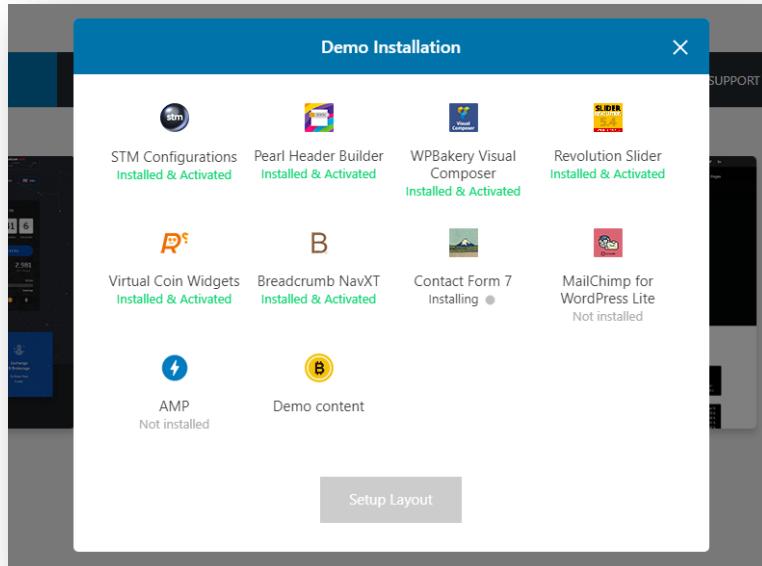

Click on **Masterstudy > Demo Import** in the WordPress menu:

Tip: You can use the demo content as a starting point for your website and modify the content to suit your needs. In that case, select the demo layout that is most appropriate for your website.

Each demo layout requires a number of plugins to function properly. Fortunately, StylemixThemes has made it easy for you to install the plugins and they will be installed automatically during demo setup proceed. In order to start the import proceed, click on the **Setup layout** button.

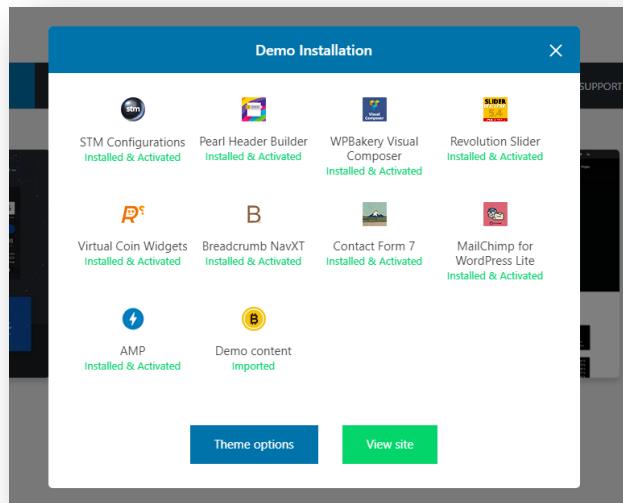

Note: Depending on the speed of your Internet connection, it may take some time to install all the plugins and import the demo content.

Note: If the import fails or stalls, please try to **reload the page** and click on **Setup layout** button once again or see the previous section: *What to do if the theme installation fails.*

Note: All the plugins which are not free come under our EXTENDED License, so you don't need to pay for their license to use them. Some of them might have messages requiring activation, but they are already activated on our side. No purchase code needed. When using them under our license you will need to wait for the plugin updates in our regular theme updates. If you want to be able to auto update them from wp-admin, you will need to buy your own personal license for that. However, we always include the latest versions of the plugins in every update of the theme.

Setup Layout feature installs all required plugins, imports the chosen demo layout and widgets. After finishing the proceed you can visit your site front page in order to see all ready features ☺

Tip: If you want to start from scratch after viewing the demo content, you can remove the demo content using the **Reset WP** plugin (<https://wordpress.org/plugins/reset-wp/>). This plugin resets the WordPress database back to its defaults. It will delete all customizations and content, but it does not modify files; it only resets the database. Please see the above link for more details.

Important Features of the Masterstudy WordPress Theme

This section describes some noteworthy features of this theme.

Bootstrap Framework

The Masterstudy Theme uses the Bootstrap framework, so you can have a layout grid of up to 12 columns to design your pages. Further, each widget has its own maximum and minimum widths, so you have the flexibility of adjusting the widths of the widgets depending on the layout of the pages.

Plugins Installed with the Theme

As mentioned before, the Masterstudy Theme requires a number of plugins to function properly.

The following table gives you a brief description of each of the plugins:

Plugin	Required/Optional	How it helps you...
Breadcrumb	Required	Allows you to set up breadcrumb navigation on the pages showing the visitors the path to their current location on your website.
NavXT		
Contact Form 7	Recommended	Allows you to easily design and add forms to your website.
Slider Revolution	Required	Helps to display image sliders or carousels on your web pages. Useful for picture galleries, introductions, etc. Has many slider options for varied purposes.
Masterstudy LMS	Required	LMS System from StylemixThemes.
Paid Memberships	Required	Plugin to Handle Memberships.
STM Configurations	Required	Imports the Demo pages.
WooCommerce	Recommended	Helps you set up your online store to sell things on your website.
WPBakery Visual Composer	Required	Helps you build pages quickly and easily with an intuitive drag-and-drop interface.

Note: We provide extra plugins with **EXTENDED** licenses and include latest updates to every version of the themes. The plugins will be updated whenever you upgrade your theme.

Types of Posts

The Masterstudy Theme comes with many built-in types of posts that are useful for business, finance, or Masterstudy firms. The following table lists the various types of posts available:

Type	Used for...
Teachers	Teachers by post type (not users) for default Masterstudy layout.
Gallery	Displaying categorized gallery images.
Events	Displaying details of your events.
Testimonials	Displaying your customers' testimonials on your website.

Changing the Title of Custom Post Types

If you want, you can change the title of the following custom post types:

- Teachers
- Gallery
- Events

To change the title of the above-mentioned custom post type:

1. Click on **Tools > STM Post Type** in the WordPress menu.
2. Here select **Post Types** and then select the custom post type you want to edit.
3. After making the changes click on the **Save & Publish** button at the top of the page.

Note: If you change any of the **STM Post Type** names, you will need to regenerate the Wordpress *Permalinks*. To do this:

Click on **Settings > Permalinks** in the WordPress menu to open the Permalink Settings page. At the bottom of the page, click on the **Save Changes** button. WordPress will regenerate the permalinks using the new names you have given.

Setting Up your Website

Once the Masterstudy Theme is installed, you will now have to customize the theme to suit your needs. The following are some of the tasks you need to complete to customize the theme:

- Set up header, footer, and sidebars for your website.
- Choose your own color scheme and typography options.
- Type in the address and other information about your organization.
- Design and add widgets to your website.
- Set up the menus of the website.
- Change the main language of the site (if your main language is not English).

The screenshot displays two overlapping configuration panels from the Masterstudy Theme's user interface.

LMS Settings (Left Panel):

- General:** Main color, Secondary color, Currency symbol, Currency Position, Thousands Separator, Decimals Separator, Number of decimals (set to 3).
- Courses:** Save Settings button.
- STM LMS:** Courses, Lessons, Quizzes, Questions, Reviews, Orders, Courses category, Posts, Media, Pages, Comments, Testimonials, Sidebars, Teachers, Galleries, Events, Contact, Appearance, Plugins, Users, Tools, WPBakery Page Builder.

Typography (Right Panel):

- Body:** Font Family: Open Sans, Font Size: 14px, Text Align: Left, Font Color: Select Color.
- Button:** Font Family: Montserrat, Font Size: 14px, Line Height: 14px, Word Spacing: 0px, Letter Spacing: 0px.
- Menu:** Font Family: Montserrat, Font Size: 14px, Line Height: 14px, Word Spacing: 0px, Letter Spacing: 0px.

Both panels include a "Save Changes" button at the bottom right.

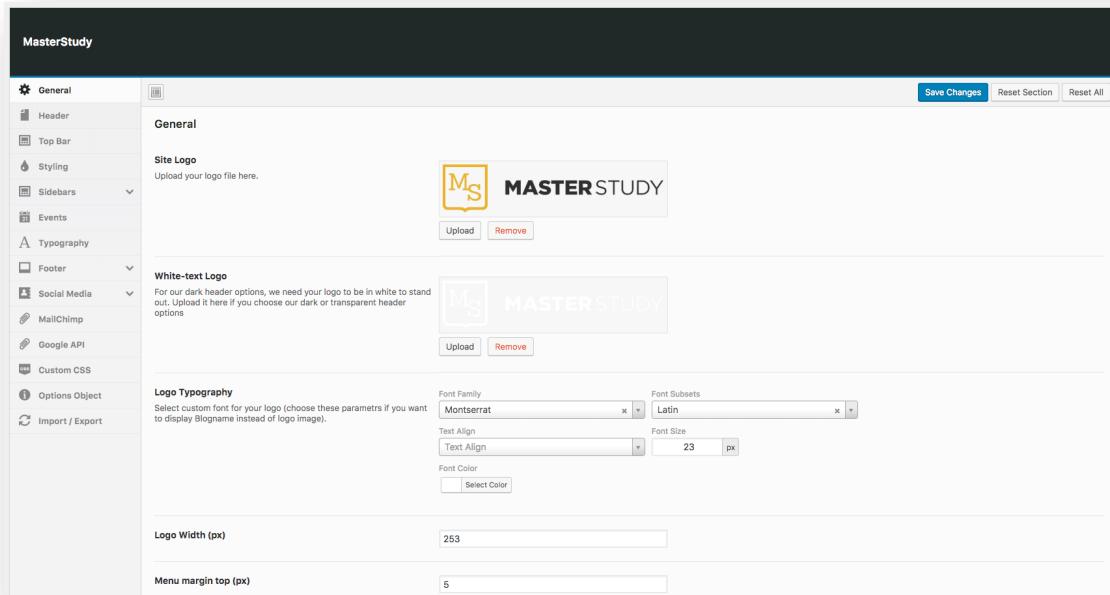

Customizing the Theme

You can perform general customization of the Masterstudy Theme by going to **Dashboard > Theme Options** (just as you would normally do for any other theme). Here, you can set up the following:

- General site settings such as logo and site icon; default visualization options; default Title Box settings, Google and PayPal API credentials, etc.
- Header and Footer for your pages.
- Colors scheme
- Typography settings.
- Page and Post Type options.
- General Page Settings such as the background image for the home page; font settings for the headings and body text of your pages; and the layout or structure of certain pages such as the archive and shop pages.

General Theme Options

Here you can setup global website settings such as site logo/icon, view types for basic modules, site width and site layout options, default settings for page Title Box, Google and PayPal API settings.

Typography settings

If you want to change your website typography settings, you need to go **Them Options > Typography**. It's possible to change typography options for Main (body) and Headings, also Paragraphs, Link, Blockquote and List settings.

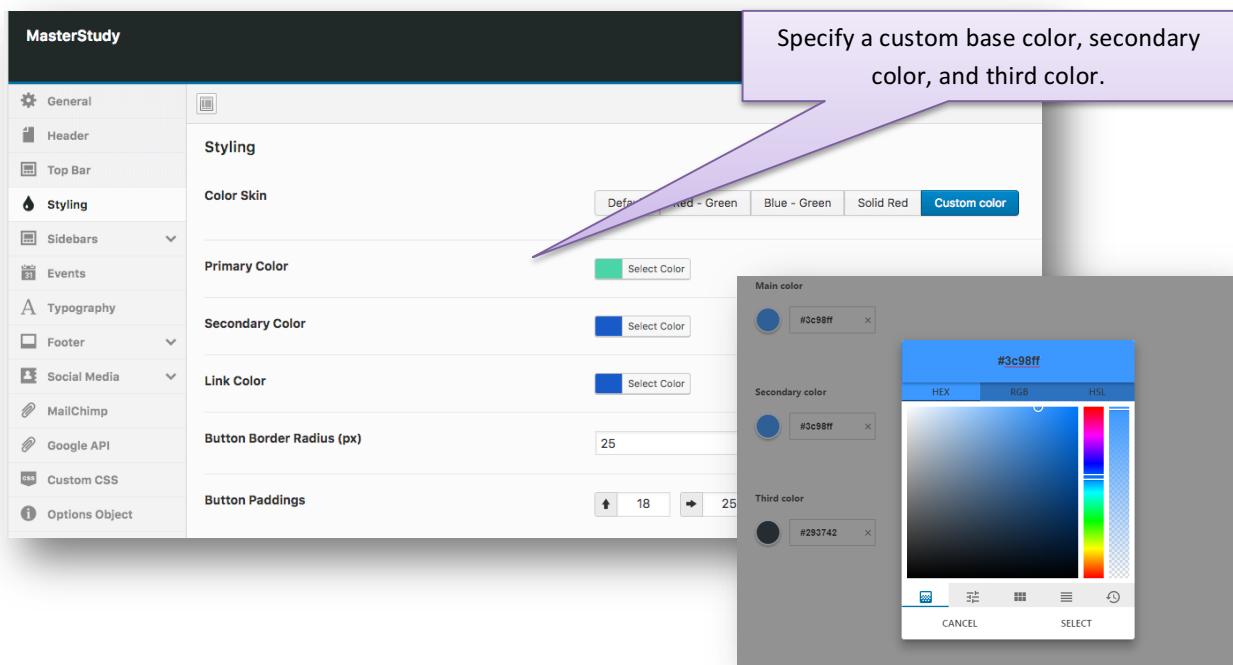

The screenshot shows the 'MasterStudy' theme options panel with the 'Typography' section selected. The left sidebar lists various theme settings like General, Header, Top Bar, Styling, Sidebars, Events, and others. The main area is titled 'Typography' and contains sections for 'Body', 'Button', and 'Menu'. Each section includes font selection dropdowns (Font Family, Font Subsets), text alignment (Text Align), font size (Font Size), and color selection (Font Color). Below these are 'H1 Margins', 'H2', 'H2 Margins', 'H3', 'H3 Margins', and 'H4' sections, each with their own font weight & style, font size, line height, word spacing, and letter spacing controls. At the top right of the main area are 'Save Changes', 'Reset Section', and 'Reset All' buttons. A 'Height' slider is visible on the right side of the interface.

Setting the General Color Scheme for your Website

With the Masterstudy theme you can specify a basic color scheme for your website. You can select from between three pre-defined schemes or create your own custom scheme by defining a base color, a secondary color and a third color.

To specify the Color Scheme:

4. Click on **Them Options > Styling** in the WordPress menu.

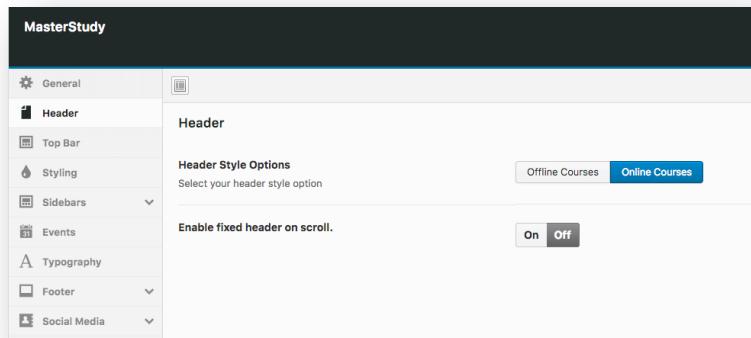

5. Click on the **Save Changes** button to save your settings.

Setting Up the Header and Top Bar

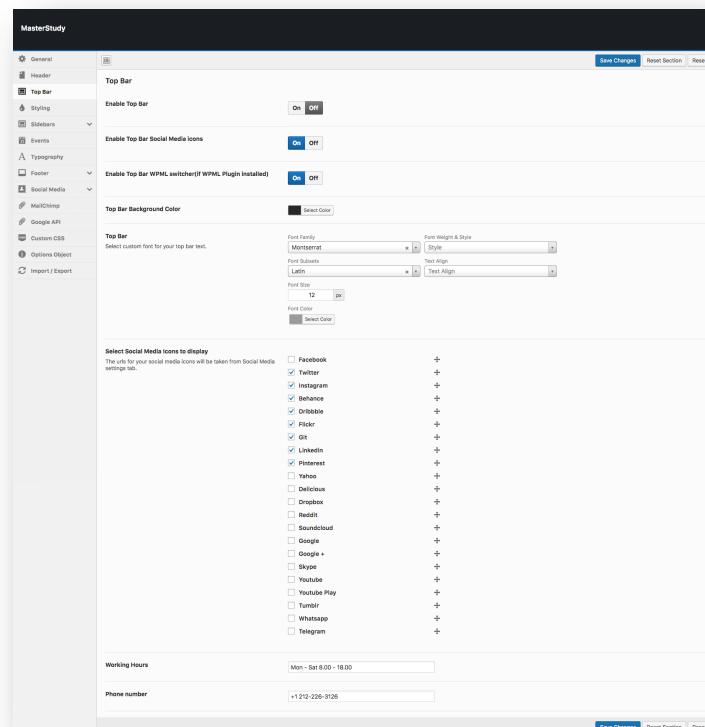

You can customize the look-and-feel of the header. You can also control what items appear in the header area of your pages.

To set up or customize the header of your web pages:

Click on **Theme Options > Header** in the WordPress menu.

Here you can choose your header style and set up Sticky Header options. Besides this, there are main top header bar settings under **Theme Options > Top Bar**.

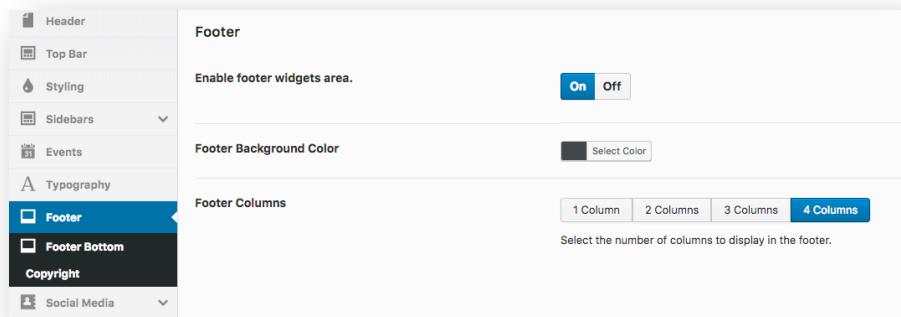

Setting Up the Footer

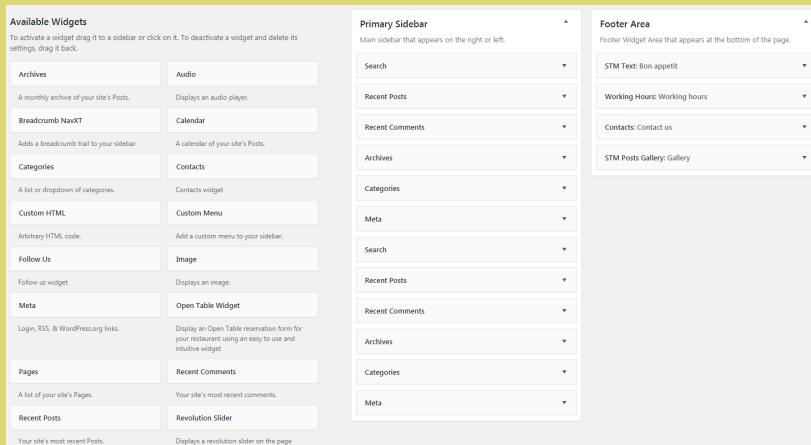

You can customize the look-and-feel of the Footer. You can have up to four footers on your pages/posts. You can control what items appear in the footer area of your pages. You can also select between two heading styles for the footer and write the copyright message to be displayed on the website.

To set up or customize the footer of your web pages:

1. Click on **Theme Options > Footer** in the WordPress menu for setting up main Footer options and choose **Footer Columns**.
2. **Theme Options > Footer > Footer Bottom** section contains additional bottom footer area settings.
3. Finally, **Theme Options > Footer > Copyright** you can enable here footer Copyright section, set up its text and logo options, select social links, etc.

Note: If you want to have multiple footers, you can specify what information should be shown in the different footers by going to **Appearance > Widgets** and dragging widgets into the different Footer areas.

Setting Up Sidebars

The Pearl Theme has two sidebars, left and right. These sidebars can be selected for archives as well as single pages or posts. You can create additional sidebars using Visual Composer widgets or elements. These additional sidebars can then be added to individual pages or posts.

To set up the sidebars:

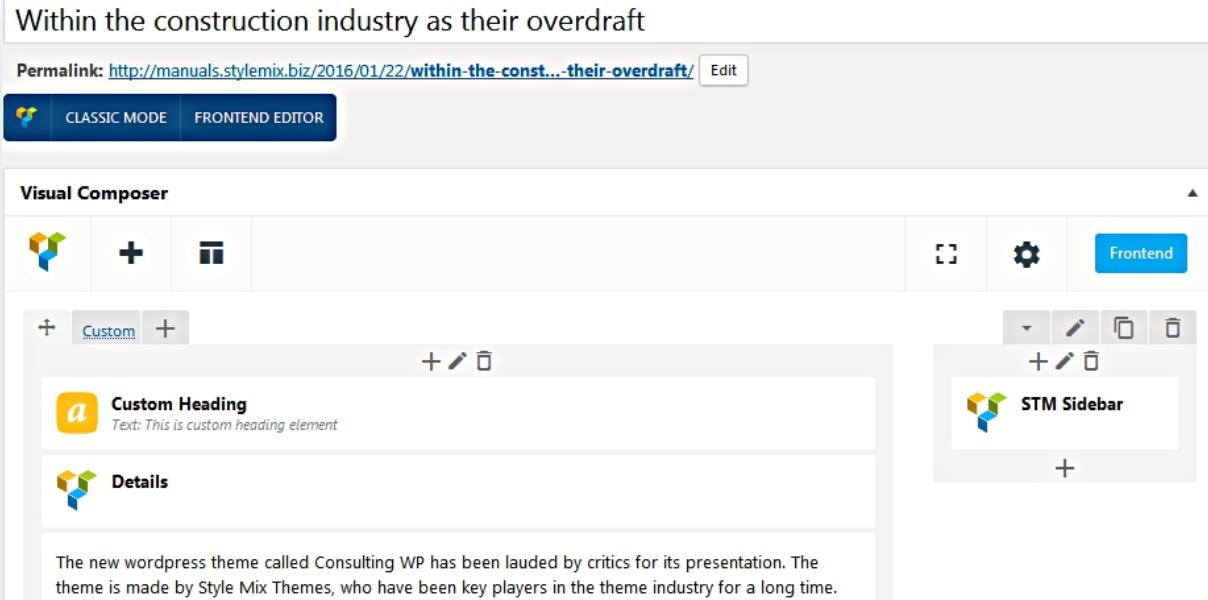

Click on **Theme Options > Sidebars** in the WordPress menu.

Note: If using the default WordPress sidebars, you can add widgets to the sidebar by going to **Appearance > Widgets** and dragging widgets onto the sidebars.

To set up sidebars on individual pages or posts:

While creating or editing the page or post, add a **Widgetised Sidebar** or an **STM Sidebar** Visual Composer element to the page.

Note: You may first have to add an extra column for the sidebar by clicking on the  button.

Within the construction industry as their overdraft

Visual Composer

Custom Heading

Text: This is custom heading element

Details

The new wordpress theme called Consulting WP has been lauded by critics for its presentation. The theme is made by Style Mix Themes, who have been key players in the theme industry for a long time.

STM Sidebar

Note: Use the **Widgetised Sidebar** element if you want to add one of your predefined *widgets* to the column, and use the **STM Sidebar** element if you want to add one of your predefined *sidebars* to the column.

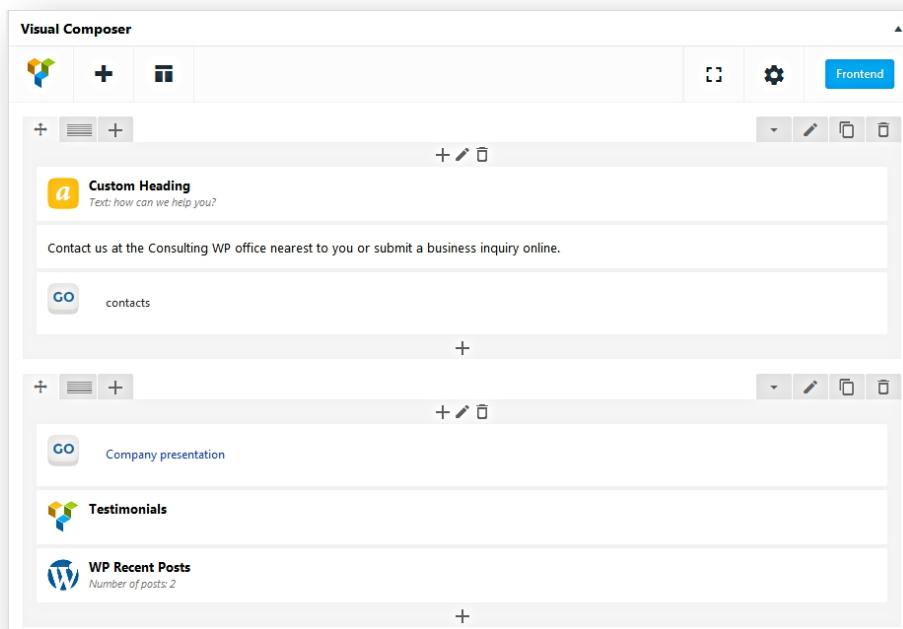

Tip: See *Appendix A: Using the WPBakery Visual Composer Plugin to Set Up the Pages* for more information on using the Visual Composer.

Creating Additional Sidebars

In addition to the left and right sidebars, you can create your own sidebars using Visual Composer widgets or elements. You can then add these sidebars to individual pages or posts.

To create additional sidebars:

1. Click on **VC Sidebars > Add New** in the WordPress menu.
2. Design the sidebar as you would design any other page. You can also add sections to the sidebar using Visual Composer Elements and Widgets, if required.

Note: Once you have created the sidebars, you can add these sidebars to any of your pages or posts. See *Setting Up Sidebars* for more details.

Setting up the Menu

As mentioned above, your theme allows you to have a menu at the top of your website pages and up to three menus in the sidebars.

To set up the Standard Menus:

1. Click on **Appearance > Menus** in the WordPress menu to open the Menus page.
2. You can now set up the menus as you would do for any other WordPress theme.
3. At the end, you can choose one of the preset menu locations in order to display your menu on **Top Header Bar**, **Header Navbar** or **Footer** menu.

Localizing or Changing the Language of the Theme

If you are using the Masterstudy Theme in a non-English speaking country, you can change the language of the theme so that the wp-admin area will be in the language of your choice.

You can change your site's main language via **Settings > General > Site Language**. This will change all your WordPress related prompts to the selected language, but you will still have to localize the theme related options and screens.

It's easy to localize your site using the [Loco Translate](#) plugin. (You can see a related tutorial in the following page: <https://localise.biz/help/wordpress/translate-plugin/beginners.>)

Another way is to add your translations using the [PoEdit](#) platform. Basically, you need to create a .po file that contains the translations and PoEdit will generate a .mo file for you. You then need to upload the .mo file to your theme's language folder (..../wp-content/themes/theme-folder/languages/).

Note: Before adding translations for static strings, you need to rename the language files correctly according your site's language. The theme language files are located in the/wp-content/themes/theme-folder/languages/ folder. You can find a list of language codes at [WordPress in your Language](#). As an example, the language code for English is en_EN, so you would save the translated files as en_EN.po and en_EN.mo.

Learning Management System

Masterstudy LMS – Learning Management System plugin includes all features for making your website LMS Portal. After installing one of the **LMS Demo Layouts**, you will be able to see LMS demo content on your site.

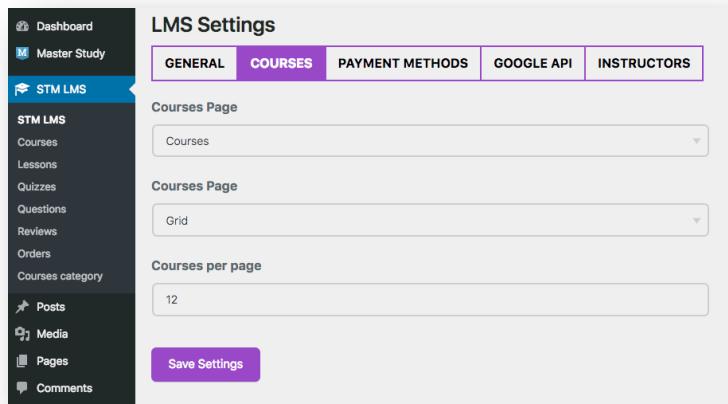

LMS Settings

You can see the main LMS Settings under **STM LMS menu** on your Dashboard. Here you can set up Color Skin for LMS pages, Currency options under **General** tab:

The screenshot shows the 'LMS Settings' page with the 'GENERAL' tab selected. On the left is a sidebar with various menu items. The main area contains settings for Main color, Secondary color, Currency symbol, Currency Position (set to 'Left'), and Thousands Separator (set to ','). A 'Save Settings' button is at the bottom.

GENERAL	COURSES	PAYMENT METHODS	GOOGLE API	INSTRUCTORS
Main color				
Secondary color				
Currency symbol				
Currency Position	Left			
Thousands Separator	,			

Courses tab contains main Course archive page settings like Courses page, Page Layout, and amount of courses per page:

You can set up also your **Payment Methods** under STM LMS settings:

The screenshot shows the 'PAYMENT METHODS' tab in the 'LMS Settings' page. It lists three payment methods with their respective configuration fields:

- Offline payment:** Includes a 'Payment method description' text area.
- Wire Transfer:** Includes fields for 'Account number', 'Holder name', 'Bank name', and 'Swift'.
- Paypal:** Includes fields for 'PayPal Email', 'United States dollar', 'Sandbox' mode, and a 'Payment method description' text area.
- Stripe:** Includes fields for 'Publishable key', 'Secret key', and 'Stripe payment'.

A purple 'Save Settings' button is at the bottom.

PayPal payment needs to set up the email and its Mode (sandbox or live). Also you should set up your PAYPAL account IPN as http://yoursite.com/?stm_lms_check_ipn=1.

Courses

LMS Courses can be found under **STM LMS > Courses** menu. Single Course have its own content which can be built via VC Page Builder, Featured Image, Categories and Course Settings.

Besides this, you can add new Lesson and Quiz or include existing Lessons and Quizzes:

The screenshot shows the 'Edit Course' screen in the STM LMS. The main area displays course details like title, description, and features. A sidebar on the right shows course categories and a featured image. Red arrows point to specific sections:

- Search for existing Courses and Quizzes**: Points to a search bar in the 'Add course data' section.
- Add new Course and Quiz**: Points to input fields for adding new sections and quizzes.
- Course Settings**: Points to the 'SETTINGS' tab in the course settings sidebar.

Main Features

- Achieve Hollywood best quality visuals out of the box.
- With complete C++ source code access, you can study.
- Creates with designer-friendly Blueprint visual scripting.
- Unreal Engine provides Robust Multiplayer Framework.
- The built-in Cascade visual effects editor enables particles.
- Unreal Engine 4's Material Editor makes use of physically-based.

What is the target audience?

You might be thinking, all of the above - and that is fine. But as a complete beginner learning Unreal Engine 4. The rendering system in Unreal Engine 4 is an all-new, DirectX 11 pipeline that includes deferred shading. Learning a new game engine as a complete beginner is very intimidating. There are a lot of tutorials, documentation and advice already out but how do you start and proceed with learning Unreal Engine 4 is unclear. You get pulled into many different directions and end up confused and overwhelmed.

I have spent a lot of time deconstructing what it takes to learn a game engine from scratch. What it is that you should focus on first and what you should avoid until later.

Excerpt

With prior experience, you will have the opportunity to walk through hands-on exercises with Hadoop and Spark framework, two of the most common in the industry. You will be comfortable explaining the specific components and basic processes of the Hadoop architecture, software stack, and execution environment. In the assignments, you will be guided in how data scientists apply the important concepts and techniques such as Map-Reduce that are used to solve fundamental problems in big data. You'll feel empowered to have conversations about big data and the data analysis concepts.

Excerpts are optional hand-crafted summaries of your content that can be used in your theme. Learn more about manual excerpts.

Lessons

STM LMS > Lessons menu includes your Lessons list. You can add your Course content wither with VC Page Builder or WP Classic Editor.

Also, **Lesson settings** section allows you to choose:

- **Lesson Type:** Text, Video or Slide;
- **Lesson duration:** any text;
- **Lesson Preview:** Makes the Lesson open/private for visitors;
- **Lesson Frontend description:** Description of the Lesson;

The screenshot shows the 'Edit Lesson' screen in the WordPress visual editor. At the top, there's a toolbar with 'Edit Lesson' and 'Add New' buttons. Below that is a title 'Design and Visualization with Nvidia'. A video player is embedded, showing a thumbnail for 'TOP 5 STORIES - GTC 2018 DESIGN AND VISUALIZATION' with an NVIDIA logo. The video player has controls for play/pause, volume, and navigation. Below the video, the 'Visual' tab is selected in the editor mode switcher. At the bottom, there's a 'Lesson Settings' panel with sections for 'Lesson type', 'Lesson duration', 'Lesson preview' (with a toggle switch), and 'Lesson Frontend description' (with a rich text editor toolbar). The status bar at the bottom indicates 'Word count: 0' and 'Last edited on August 7, 2018 at 12:13 pm'.

Quizzes and Questions

Quiz can be created via **STM LMS > Quizzes** menu. Each Quiz may include unlimited **Questions**. You can add either existing questions to your Quiz or create new one via **Add new question** field.

Quiz settings includes:

- **Quiz Frontend description:** Description of the Lesson;
- **Quiz duration:** duration in minutes/hours/days;
- **Show correct answer:** displays correct answer at the end of the Quiz;
- **Passing grade:** Minimum percentage of correct answers for passing the quiz;
- **Points total cut after re-take:** Quiz re-take cut percentage;

The screenshot shows the 'Edit Quiz' interface. At the top, there are tabs for 'Edit Quiz' and 'Add New'. Below this, the 'Quiz Questions' section lists ten questions with edit icons. A 'Search questions' input field is below the list. An 'Add new question' section with a text input and a '+' button follows. The bottom half of the window is titled 'Quiz Settings' and contains fields for 'Quiz Frontend description' (with a rich text editor toolbar), 'Quiz duration' (with inputs for 'Enter quiz' and 'Minutes'), 'Show correct answer' (a toggle switch), 'Passing grade (%)' (input field), and 'Points total cut after re-take (%)' (input field).

You can find all your questions under **STM LMS > Questions** menu. Question type can be **Single Choice, Multi Choice, True or False**:

The screenshot shows the 'Edit Question' interface. At the top, there's a title bar with 'Edit Question' and 'Add New'. Below it is a question text field containing 'Is 380MBps transfer rate of a standard USB 2.0 Device?'. Under 'Question Settings', the 'Question type' is set to 'Single choice'. The 'Answers' section contains three entries:

- Answer 1 (Correct)
Answer explanation (Will be shown in "Show Answers" section)
- Answer 2
Answer explanation (Will be shown in "Show Answers" section)
- Answer 3
Answer explanation (Will be shown in "Show Answers" section)

Below the answers are buttons for 'Enter new Answer' and 'Add Answer'. A 'Question result explanation' section is also present.

Reviews

Users can leave reviews for Courses and you can see all reviews under **STM LMS > Reviews** menu:

The screenshot shows the 'Edit Review' interface. At the top, there's a title bar with 'Edit Review' and a URL 'Permalink: http://themes.stylemix.biz/stm-reviews/nice-course/'. Below it is a rich text editor toolbar with options like 'Add Media', 'Visual', and 'Text'. The main content area contains the text 'This course was very helpful for me!'. At the bottom, there are sections for 'Review info', 'Course Reviewed' (set to 'Run Forest, Run, How to create Running Route'), 'User Reviewed' (set to 'Choose User'), and 'User Review mark' (set to '5').

Orders

You can check orders through **STM LMS > Orders**:

Order	Order Key	Order Status
#432 Stylemix Themess	115330401265b6055fe50dab	cancelled

Paid Memberships PRO

Masterstudy LMS plugin supports Paid Memberships plugin and smoothly works together for creating Membership System with **Subscription Plans** on your website.

This third-party plugin allows you to create Membership Levels (Plans). In order to create Membership Plans, got to **Dashboard > Memberships > Add New Level**. Here you can set up Plan options and number of available courses in subscription under **STM LMS Settings**:

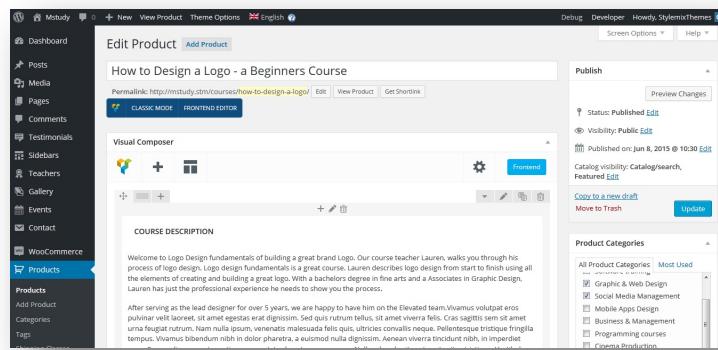

The screenshot shows the 'Add New Membership Level' page of the Paid Memberships Pro plugin. At the top, there are tabs for 'Membership Levels', 'Pages', 'Payment Gateway & SSL', 'Email', 'Advanced', and 'Add One'. Below the tabs, there are fields for 'Name' and 'Description', each with a rich text editor. Under 'Billing Details', there are fields for 'Initial Payment' and 'Recurring Subscription'. In the 'Other Settings' section, there are checkboxes for 'Disable New Enquiry' and 'Membership Expiration'. The 'STM LMS Settings' section is highlighted with a red box. It contains a field 'Available number of courses in subscription' with a value of 0. At the bottom, there are 'Content Settings' with categories like 'Advertisement', 'Hobbies', 'Technology', and 'Uncategorized', and buttons for 'Save Level' and 'Cancel'.

Payment Gateway also should be set up separately for Membership plans:

The screenshot shows the 'Payment Gateway & SSL Settings' page of the Masterstudy LMS. On the left, there is a sidebar with icons for STM LMS, Posts, Media, Pages, Comments, Testimonials, Sidebars, Teachers, Galleries, Events, Contact, Appearance, Plugins, Users, Tools, WPBakery Page Builder, and Settings. Under 'Settings', the 'Memberships' option is selected. The main area has tabs for 'Membership Levels', 'Pages', 'Payment Gateway & SSL', 'Email', 'Advanced', and 'Add Ons'. The 'Payment Gateway & SSL Settings' section contains fields for 'Payment Gateway' (set to 'Testing Only'), 'Gateway Environment' (set to 'Sandbox/Testing'), 'Currency' (set to 'US Dollars (\$)'), 'Accepted Credit Card Types' (which is expanded to show 'Visa', 'Mastercard', 'American Express', 'Discover', 'Diner's Club', 'EnRoute', and 'JCB'), 'Sales Tax (optional)', 'SSL Settings' (with 'Force SSL' set to 'No'), 'SSL Seal Code' (with a placeholder for 'Your SSL Certificate'), and 'Extra HTTPS URL Filter' (with a checkbox for 'Pass all generated HTML through a URL filter to add HTTPS to URLs used on secure pages').

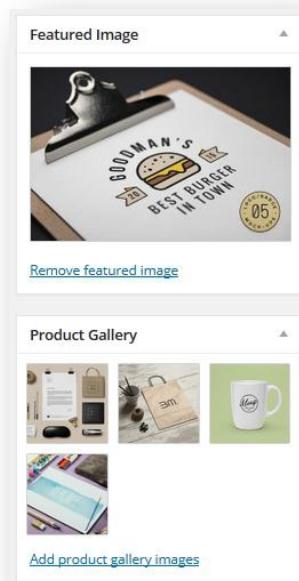

Woocommerce Courses (not LMS)

Default Masterstudy layout Courses are built on WooCommerce Products. To create a course, you need to add a **Product**:

For each course you can specify the Category, add Course name and Description. For the Description we use standard Content area with Visual Composer, where you can insert any shortcode you would like to display.

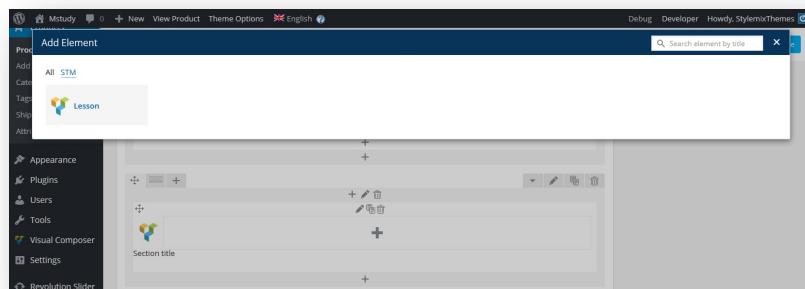

Moreover, you can add the course image or image gallery:

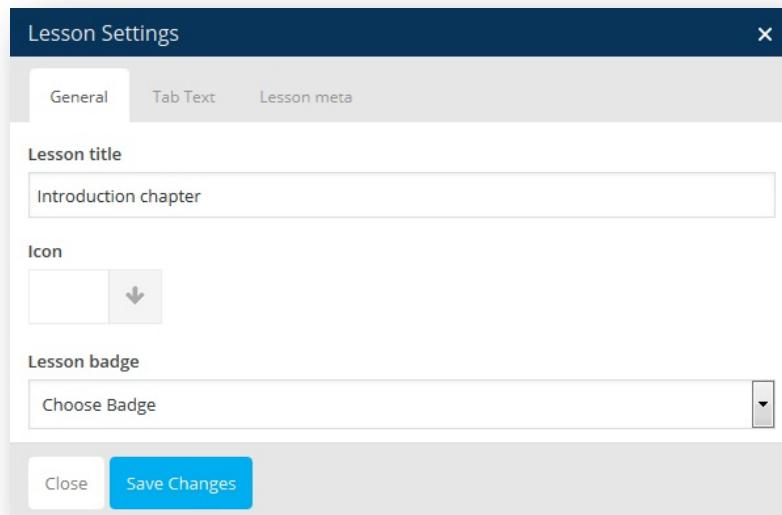

For the Content area – if you want to add a Course plan, Course sections or Course lessons overview, just insert the Course Lessons shortcode:

After you insert it, you have the option to add a lesson into the Course section:

After you add a Lesson, it has additional options:

Once you complete the Course description, go to the Product Data to specify the Price:

The screenshot shows the 'Product Data' section for a 'Simple product'. The 'SKU' field is set to '001'. The 'Regular Price (\$)' field contains '89'. The 'Sale Price (\$)' field contains '50' and has a link labeled 'Schedule' next to it. Other tabs visible include General, Inventory, Shipping, Linked Products, Attributes, and Advanced.

If it's a Free course, you just put 0 for Regular Price. If you have limited seatings in classes, you should go to Inventory tab specify Stock Qty.

After that you can specify the Course Details information and assign a Teacher of that Course.

The screenshot shows the 'Course Details' and 'Course Teacher' sections. In 'Course Details', the 'Status' is set to 'Hot', 'Duration' is '72 hours', 'Lectures' is '102', 'Video' is '9 hours', and 'Certificate' is 'Certificate of Completion'. In the 'Course Teacher' section, 'Teacher' is listed as 'Peter Parker'.

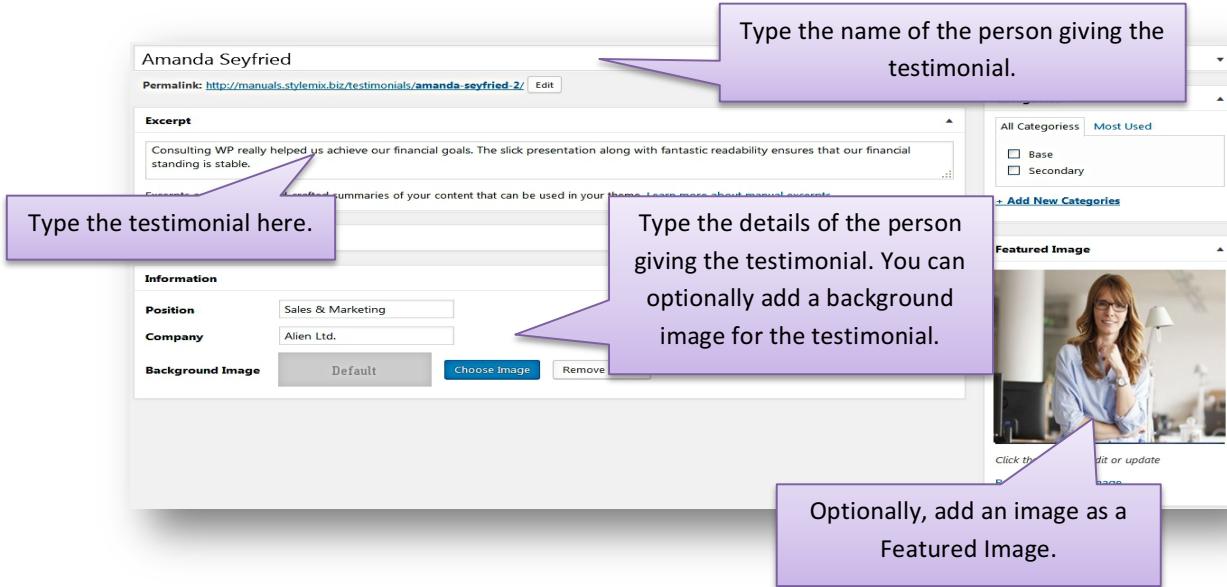

Adding Testimonials

Testimonials are important for strengthening the credibility of your organization.

You can easily add Testimonials using a custom post type of Testimonials. You can also define categories for the testimonials and display testimonials of different categories on different pages.

To add Testimonial posts:

1. Click on **Testimonials > Add New** in the WordPress menu.

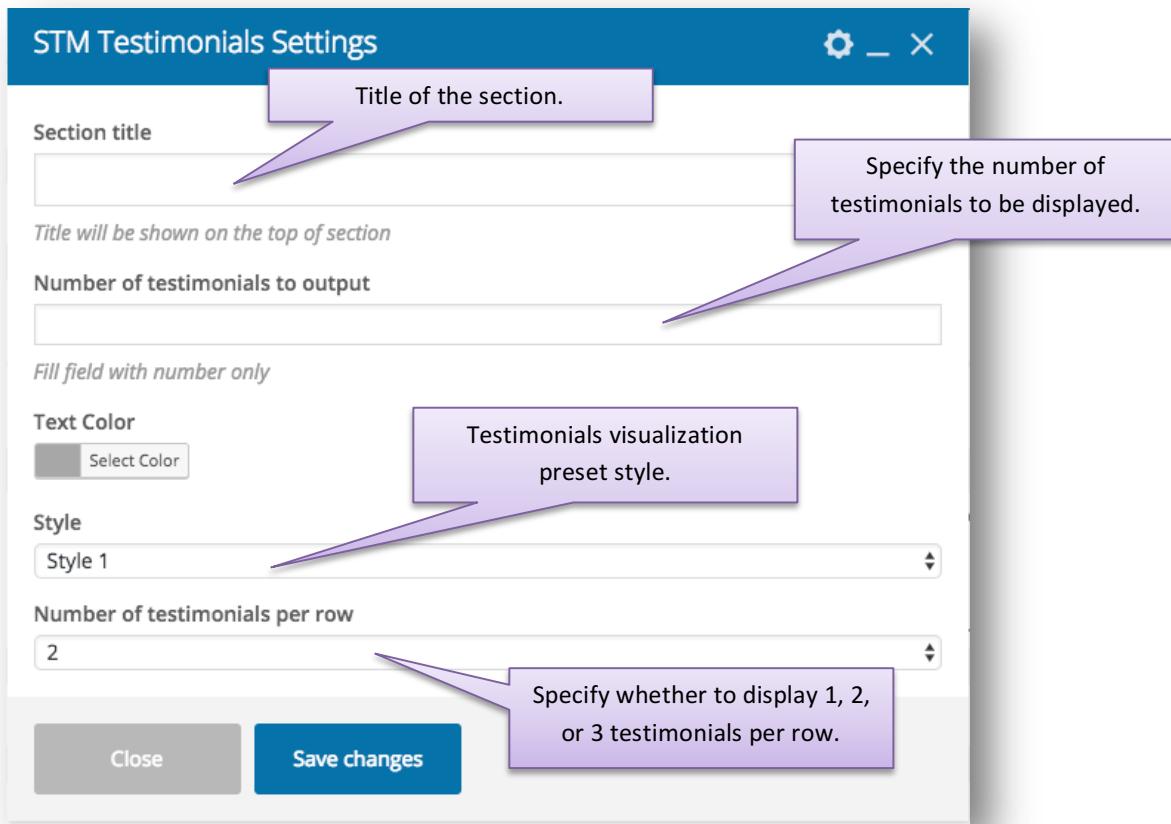

Displaying Testimonials on Other Pages or Posts

Once you have created the Testimonial posts, you can display them all over the site, by just inserting a Visual Composer Testimonials or Testimonials Carousel element.

To display the testimonials on the website:

1. Add the Visual Composer **STM Testimonials** element on any page or post where you want to display the testimonials.

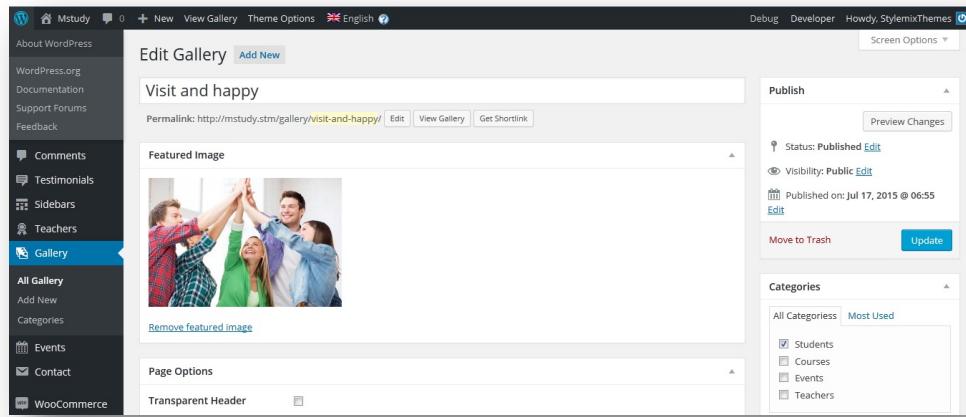

Tip: See Appendix A: Using the WPBakery Visual Composer Plugin to Set Up the Pages for more information on using the Visual Composer.

Gallery

Galleries are created as a custom post type for special images collection. It has **Categories** that can be ordered as needed. Here you create just single gallery photo.

All the content of **Gallery** page can be built by means of Visual Composer on the Gallery page.

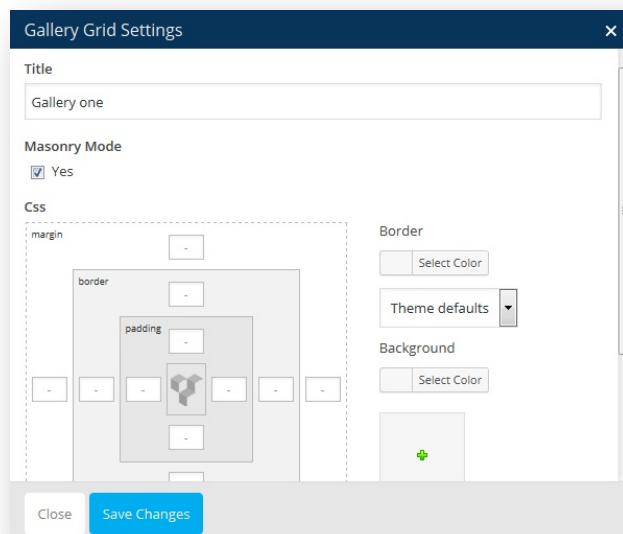

So basically, you create an individual post describing for each photo in your gallery. After that you go to the **Pages > Add new**.

On the new page you should insert Gallery Grid shortcode from Visual Composer.

After that you can have an option go make your gallery view **Masonry** or **Standard** grid (by default):

Events

Events are created as another custom post type called **Gallery**. You can see all your Events under **Dashboard > Events** menu on your Admin menu.

It has **Tags** that can be ordered as needed.

Name	Description	Slug	Count
african		african	1
art		art	1
beauty		beauty	2
BRICS		brics	1
camera		camera	1
challenge		challenge	1
Chicago		chicago	1
Childhood		childhood	0
childs		childs	2
church		church	0
college		college	2
depressive		depressive	0
developing		developing	1

All the content of **Event** page can be built by means of Visual Composer. And there is a main Information section for the Event details:

The screenshot shows the 'Edit Events' page for the 'Conscious Discipline Summer Institute'. The main area features a rich text editor with a 'Widgetized Sidebar' on the left. The sidebar includes sections for 'Event Info', 'Custom Heading', 'Post tags', and 'Share'. Below the editor is an 'Excerpt' field. On the right, a 'Publish' sidebar offers options to 'Save as Pending', 'Status: Published', 'Visibility: Public', and 'Publish Immediately'. A red box highlights the 'Event Info' section, which contains fields for Event Start (February 10, 2016 11:00), Event End (February 12, 2016 1:00), Event Location (Chicago, WY 82601, US), and Event Price (\$10).

Also, there is **All Participants** section in order to see the list of the joined users:

The screenshot shows the 'All Participants' section for the user 'Felix'. The participant information includes an Email (felix@stylemixthemes.com), Phone (1798562845), and Event ID (881). The right side features a 'Publish' sidebar with options to 'Save as Pending', 'Status: Pending Review', 'Visibility: Public', and 'Publish Immediately'.

Adding Other Content

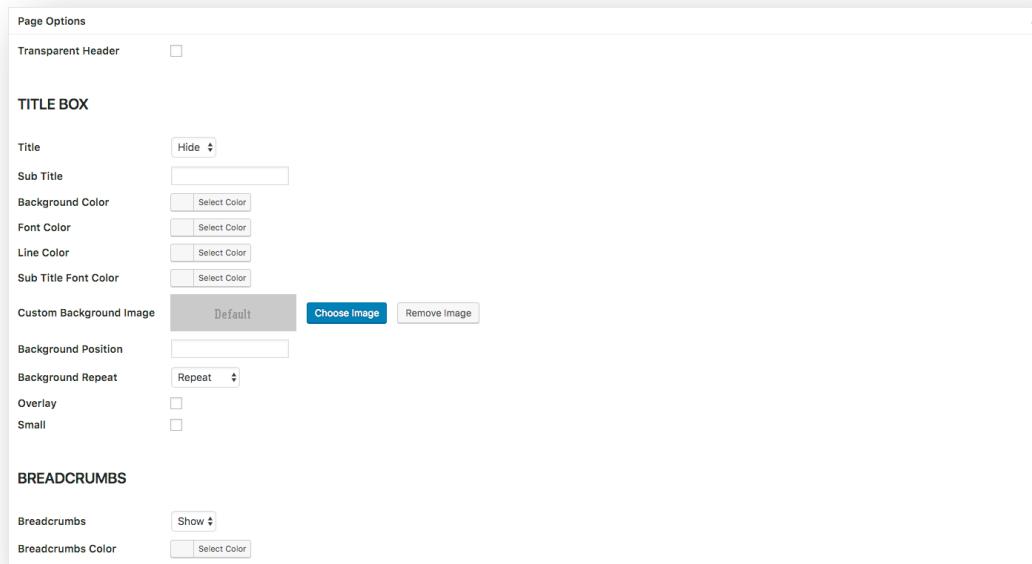

Other than the special types of content covered in the previous sections of this manual, you can also add regular content to your website as normal pages and posts. You can create your pages using Classic mode or the Visual Composer Backend or Frontend Editors.

Tip: See *Appendix A: Using the WPBakery Visual Composer Plugin to Set Up the Pages* for more information on using the Visual Composer.

Additional Options for Pages and Posts

The following additional options are available while adding pages and posts:

1. You can add sliders to the page (if you have set up sliders using the Revolution Slider plugin).
2. You can change the formatting of the page title area (for a particular page) using the **Page setup** panel.

Miscellaneous Features

The Masterstudy Theme also supports blogs. You can set up a custom blog page. You can also have custom sidebars on the blog.

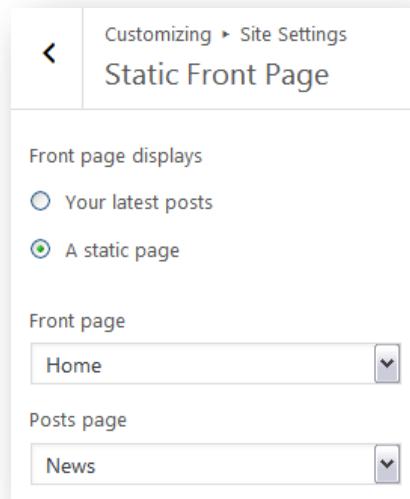

The Masterstudy Theme is also compatible with the WooCommerce plugin, so you can have an e-commerce shop on your website.

Adding a Blog to your Website

You can also have a regular blog on your website where you (or anyone with admin/author rights) can put up posts.

Note: Blog posts can be published from the WordPress admin area. Only someone with admin or author rights can put up blog posts.

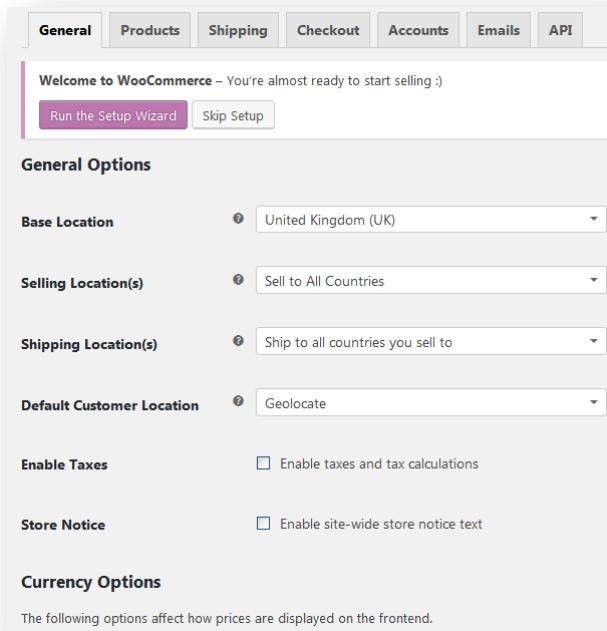

You can assign any page you create as the start page of your blog by clicking on **Appearance > Customize > Site Settings > Static Front Page** and selecting the page in the **Posts page** drop-down list.

Incorporating a WooCommerce Shop in your Website

WooCommerce is the most popular e-commerce plugin for WordPress. Now you can have a shop with all e-commerce features on your WordPress site.

Before you start adding products, please go through the WooCommerce plugin settings and specify everything you need for your shop.

Please see <https://docs.woothemes.com/documentation/plugins/woocommerce/getting-started/> for more details on setting up a shop using the WooCommerce plugin.

Updating the theme

We will periodically provide updates of your theme. These updates are essential if you want to have a bug-free website as we give new features and improvements to the theme over time. Some of these updates might be needed in order to make the theme compatible with newer versions of WordPress.

Note: There is no risk of losing your settings and pages when you update the theme. However, any modifications you have made to the core theme files will be lost, so you should back up those files before you update the theme.

Tip: After upgrading the theme, you can update extra plugins via **Appearance > Install Plugins**.

There are three ways of updating our WordPress themes to newer versions:

- Updating via the WordPress Admin Panel (using Dashboard > Updates)
- Update via the WordPress Admin Panel (using an extra plugin)
- Updating via FTP

Updating via the WordPress Admin Panel (using Dashboard > Updates)

The easiest way of updating the theme is via **Dashboard > Updates**. When an update is available for your theme, you will get a notification in your WordPress Dashboard and you can update your theme by clicking on **Dashboard > Updates** and updating the theme (just as you would update any other installed theme).

Note: You will need the token key you had generated when you had originally installed the theme. You will find this under the **Settings > API Keys** section of your profile on Themeforest.

Tip: After upgrading the theme, you can update extra plugins via **Appearance > Install Plugins**.

Updating via the WordPress Admin Panel (using an Extra Plugin)

For this method you should first install the Easy Theme and Plugin Upgrades plugin (<http://wordpress.org/plugins/easy-theme-and-plugin-upgrades/>) This plugin will update your theme when you upload the theme.zip file.

Once you have installed the Easy Theme and Plugin Upgrades plugin:

1. Download the theme file update from ThemeForest.
2. Extract the **masterstudy.zip** file from the downloaded theme file.
3. In the WordPress dashboard, click on **Appearance > Themes > Add New > Upload Theme > Browse...**
4. Select the **masterstudy.zip** file that you extracted in step 2 and click on **Install Now**.

Tip: After upgrading the theme, you can update extra plugins via **Appearance > Install Plugins**.

Updating via FTP

Another way of updating your theme is via FTP.

Extract the contents of the **masterstudy.zip** file (which you will find inside the theme update file you have downloaded from Themeforest). The contents will be extracted to a folder called **masterstudy** and to subfolders within the **masterstudy** folder.

Tip: Make sure your unzipping software does not create any extra directory with the same name nested within the **masterstudy** folder. In other words, make sure you extract the files to **masterstudy** and not **masterstudy\ masterstudy**.

Using an FTP program, upload the **masterstudy** folder (and its subfolders) to **/wp-content/themes/** on your web server.

Note: The FTP program will give a warning that the **masterstudy** folder already exists. Choose **Replace All**.

Tip: After upgrading the theme, you can update extra plugins via **Masterstudy > Plugins**.

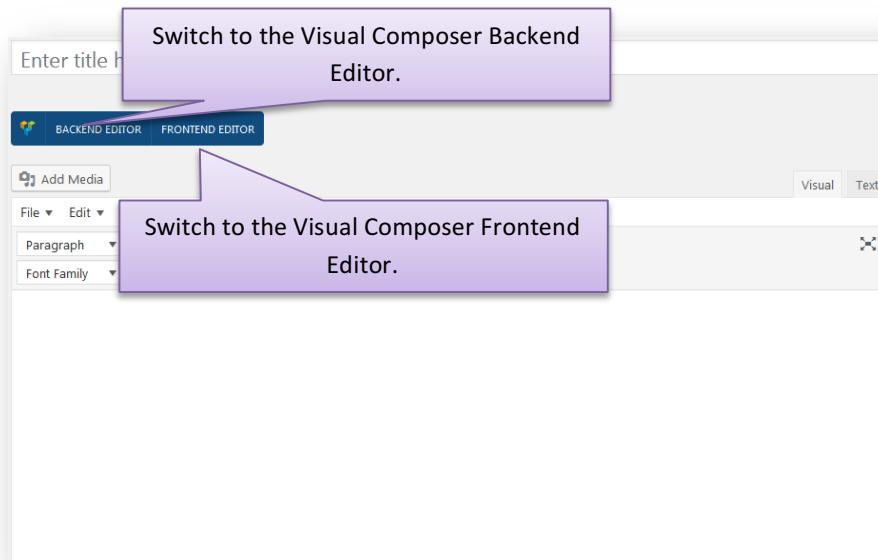

Appendix A: Using the WPBakery Visual Composer Plugin to Set Up the Pages

Your Masterstudy Theme incorporates the WPBakery Visual Composer plugin that helps you build pages quickly and easily with an intuitive drag-and-drop interface.

Note: This appendix gives you a brief overview of using the WPBakery Visual Composer to create your pages. Please see http://codecanyon.net/item/visual-composer-page-builder-for-wordpress/full_screen_preview/242431 to view a short manual on how to use the Visual Composer, or <http://vc.wpbakery.com/video-tutorials/> to see some tutorial videos.

Tip: Click on **Visual Composer > General Settings** in the WordPress menu to set up or control the functioning of the Visual Composer plugin.

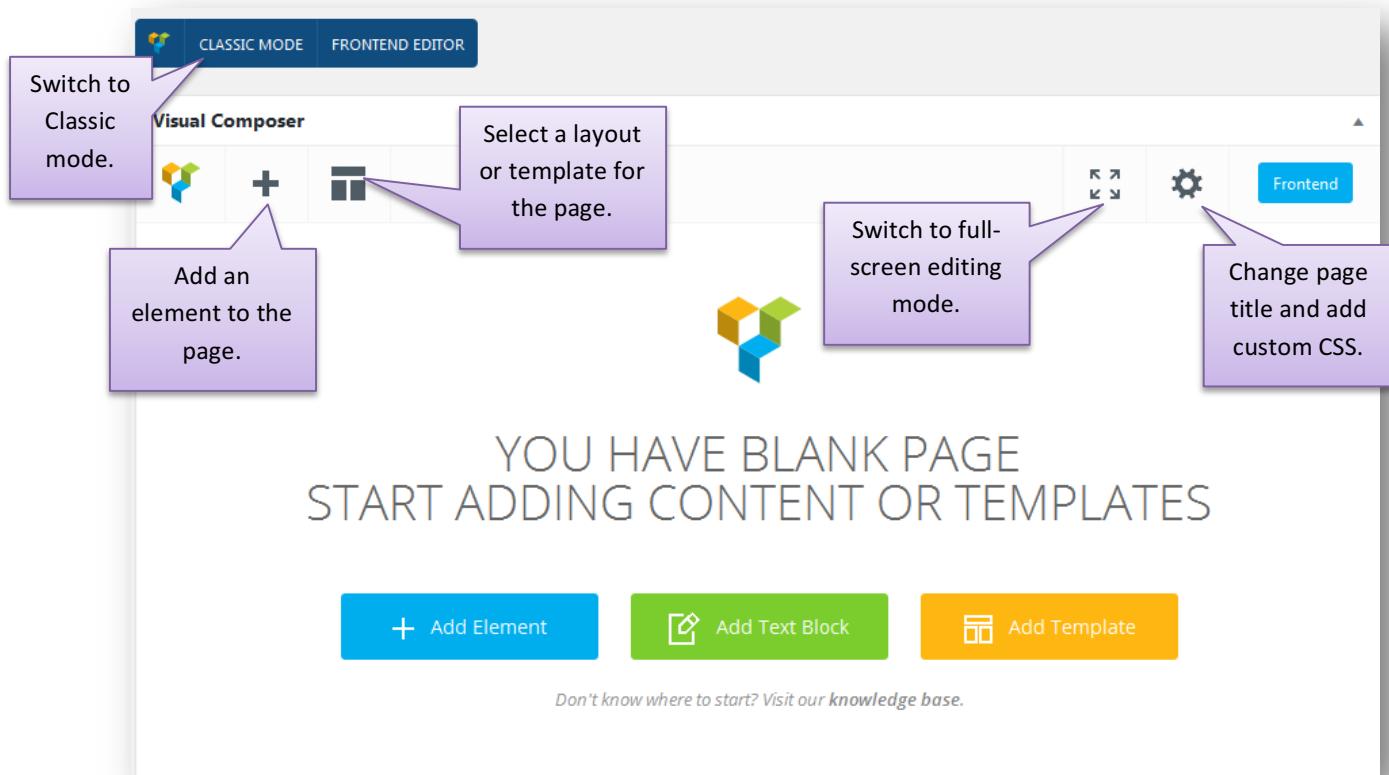

You can control whether the Visual Composer plugin should be enabled or not for different types of pages and posts in the Visual Composer Settings pages. If the Visual Composer is disabled, you will see the WordPress **Classic Editor** with buttons to switch to the Visual Composer (as in the following image):

As can be seen in the above image, the Visual Composer can work in two modes: as a Backend editor, or as a Frontend editor.

Working with the Backend Editor

Click on the Backend Editor button to switch to the Backend mode.

To add an element to the page, click on the **Add Element** button and select an element or widget from Visual Composer's vast array of elements or widgets.

Click on these tabs to view elements of a particular category.

The screenshot shows a grid of 30 different element cards, each with an icon and a brief description. A large callout box points to the top navigation bar, which includes tabs for All, Content, Social, Structure, WordPress Widgets, WooCommerce, STM, STM Post Partials, STM Vacancy Partials, and STM Staff Partials. The STM, STM Post Partials, and STM Vacancy Partials tabs are highlighted with a red border. A second callout box points to one of the element cards, specifically the 'Revolution Slider' card, with the text 'Click on any item to add it to the page.'

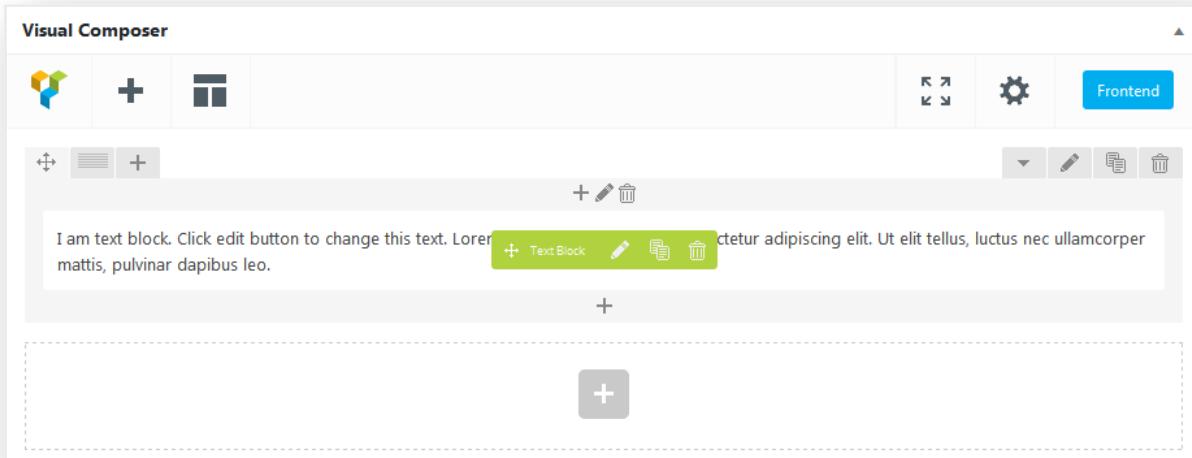

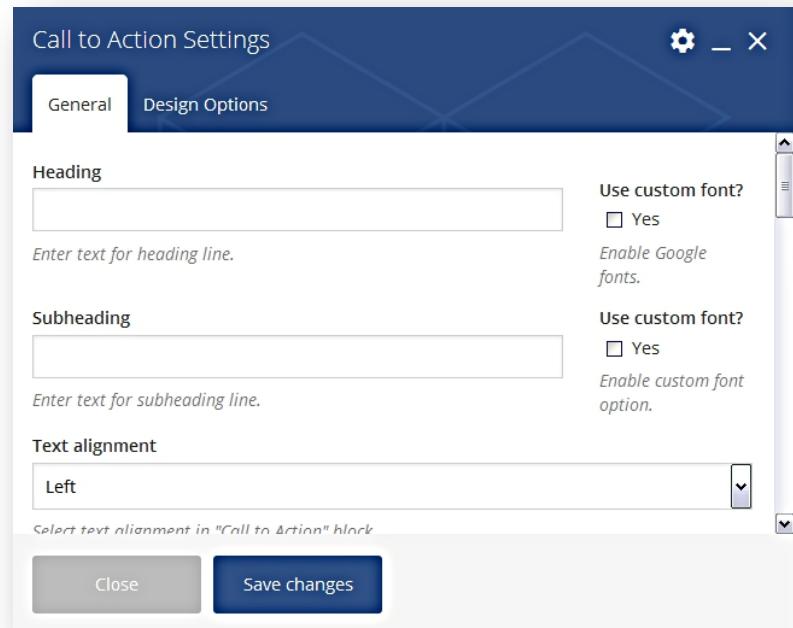

All	Content	Social	Structure	WordPress Widgets	WooCommerce	STM	STM Post Partials	STM Vacancy Partials	STM Staff Partials
Contact Form 7 Place Contact Form7	Row Place content elements inside the row	Text Block A block of text with WYSIWYG editor	Section Group multiple rows in section	Icon Eye catching icons from libraries	Separator Horizontal separator line				
Separator with Text Horizontal separator line with heading	Message Box Notification box	Facebook Like Facebook "Like" button	Tweetmeme Button Tweet button	Google+ Button Recommend on Google	Pinterest Pinterest button				
FAQ Toggle element for Q&A block	Single Image Simple image with CSS animation	Image Gallery Responsive image gallery	Image Carousel Animated carousel with images	Tabs Tabbed content	Tour Vertical tabbed content				
Accordion Collapsible content panels	Pageable Container Pageable content container	Custom Heading Text with Google fonts	Button Eye catching button	Call to Action Catch visitors attention with CTA block	Widgetised Sidebar WordPress widgetised sidebar				
Posts Slider Slider with WP Posts	Video Player Embed YouTube/Vimeo player	Google Maps Map block	Raw HTML Output raw HTML code on your page	Raw JS Output raw JavaScript code on your page	Flickr Widget Image feed from Flickr account				
Progress Bar Animated progress bar	Pie Chart Animated pie chart	Round Chart Pie and Doughnut charts	Line Chart Line and Bar charts	Empty Space Blank space with custom height	Post Grid Posts, pages or custom posts in grid				
Media Grid Media grid from Media Library	Post Masonry Grid Posts, pages or custom posts in masonry grid	Masonry Media Grid Masonry media grid from Media Library	Revolution Slider Place Revolution slider	Cart Displays the cart contents	Checkout Displays the checkout				

Note: You will find all the Masterstudy Theme related elements or widgets in the **STM, STM Post Partials, STM Vacancy Partials, and STM Staff Partials** tabs.

For some of the elements you may have to specify additional details or settings.

The element will be added to your page and formatted according to your settings.

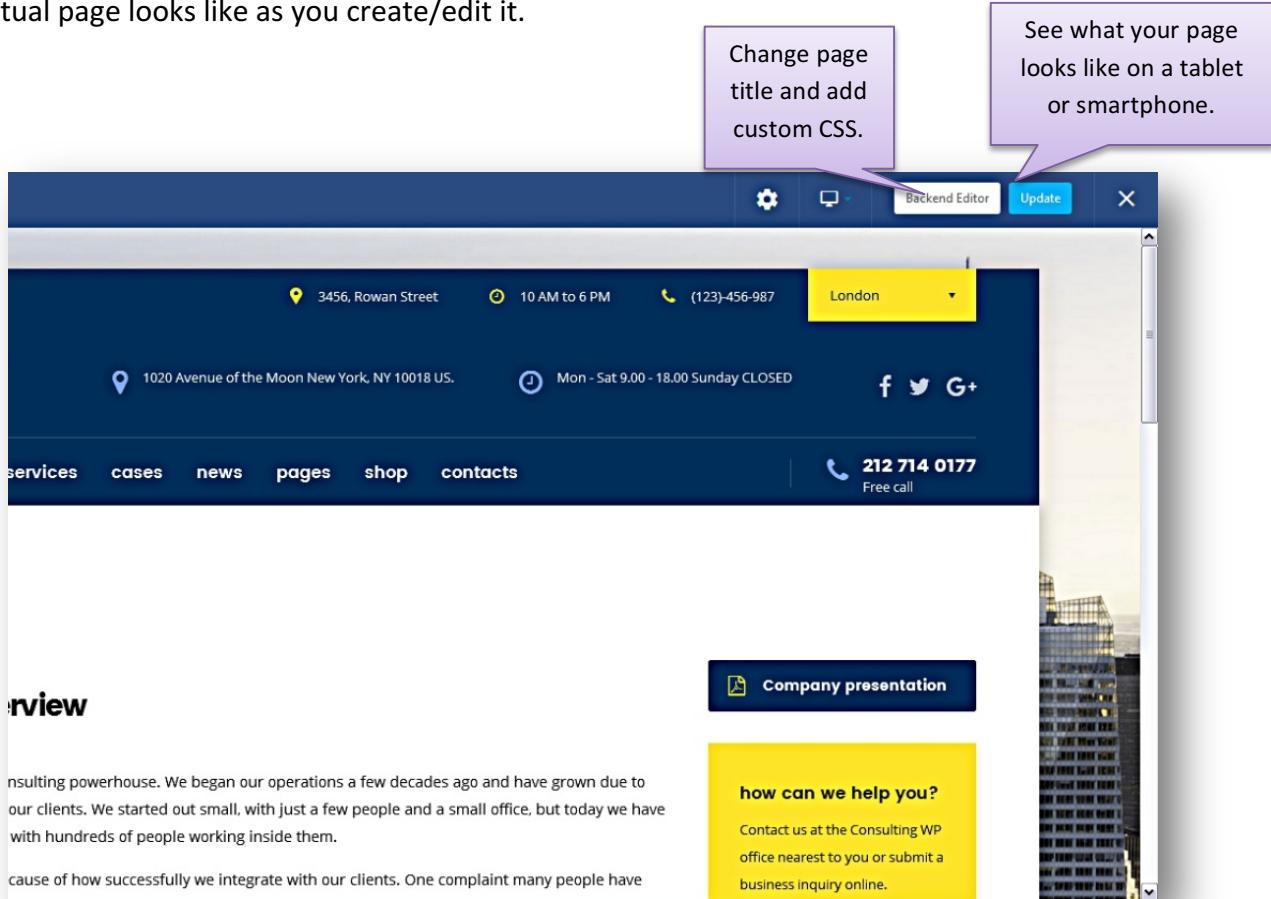

To make changes to any added element, hover the mouse pointer over the element. You will see icons that allow you to move, edit, copy or delete the item.

Tip: As you add elements with the Visual Composer, use the **Preview** button to see what your page will look like.

Working with the Frontend Editor

The Backend Editor shows you the “blocks” that make up your page, but does not show you what your page actually looks like. Alternatively, you can work with the Frontend Editor to see what the actual page looks like as you create/edit it.

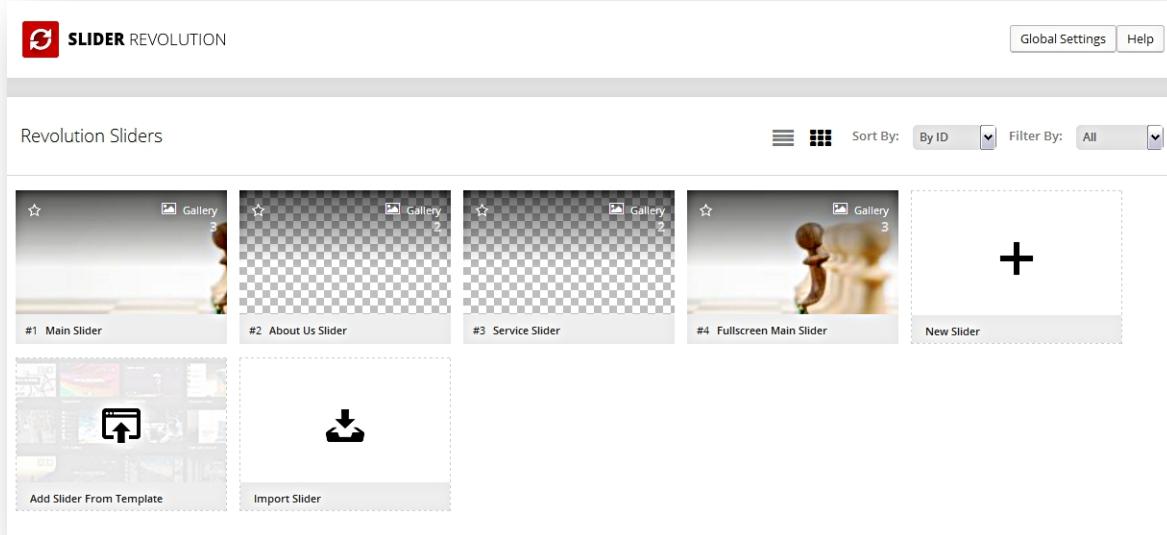

Note: This was just a brief overview of using the WPBakery Visual Composer to create your pages. Please see http://codecanyon.net/item/visual-composer-page-builder-for-wordpress/full_screen_preview/242431 to view a short manual on how to use the Visual Composer, or <http://vc.wpbakery.com/video-tutorials/> to see some tutorial videos.

Appendix B: Using the Revolution Slider

Your Masterstudy Theme incorporates the Revolution Slider plugin that allows you to display a series of images or other content on your web pages as a slider or carousel. This is useful for picture galleries, introductions, etc.

Note: This appendix gives you a brief overview of using the Revolution Slider. Please see <http://www.themepunch.com/revslider-doc/slider-revolution-documentation/> for more detailed instructions.

Before you can add a slider to a page/post, you first have to create the slider. Click on **Slider Revolution** in the WordPress menu to access the Sliders page.

You can create a new slider from scratch or you can use a free or paid template.

Once the slider has been created, you can add it to your pages/posts in one of the following ways:

- In the page/post editor, add a shortcode `[rev_slider alias="xxx"]` (where "xxx" is the name of the slider), or using the Classic Editor, click on the button and select a slider to insert it at your cursor location.
- In the Widgets screen (**Appearance > Widgets**), drag the "Revolution Slider" widget to a sidebar.
